

EuroGentest at the European Society of Human Genetics

June 23-26, 2012

Nuremberg (Germany)

The annual meeting organized by the **European Society of Human Genetics** is the place for research scientists and medical geneticists to get together and present their results and discuss the latest developments in the field of human genetics.

This year the meeting took place in **Nuremberg**, a historical city in Bavaria, Germany at the Nurnberg Convention Center Ost, one of the largest convention centers in Europe.

EuroGentest was well represented at the ESHG conference. Together with ESHG and Orphanet a **booth** was held at the exhibition hall and several EuroGentest members were in Nuremberg to present their work or host workshops and satellite meetings.

The major focus at the booth was to make sure that it was very clear what EuroGentest is and what we can do for people. With one general **poster** highlighting our **three major target audiences**: Genetic laboratories, Medical professionals and Patients and families we wanted to make sure people knew who we could be of help for.

At the booth there was the possibility to read the patient leaflets, the clinical utility gene cards and to take the several flyers we provided on External Quality Assessment (EQA) schemes and their providers, the workshops, etc...

Not only were we able to welcome many booth visitors, we are very glad that the booth was a meeting point for the several people involved in the EuroGentest project. It made it all the more easy to help people by bringing them in to contact directly with the experts.

Event though the beautiful weather chased many people outside during lunch breaks, EuroGentest welcomed a lot of people at the booth, with questions about the patient leaflets, the clinical utility gene cards, EQA schemes, workshop calendars, etc...

We are confident we have been able to be of help to these people and hope to repeat this next year in Paris at the ESHG 2013 conference. Many thanks to all the EuroGentest participants that assisted at the booth, thanks to all the visitors and please keep an eye on our website and visit us again next year!

The EuroGentest coordination team.
